NEW TECHNOLOGY FROM PANASONIC

See There

When You Can't Be There™

- Are the kids home from school yet?**
- How is the Nanny getting along?**
- What's going on at your store?**
- What set off your security alarm?**
- What is the dog up to?**

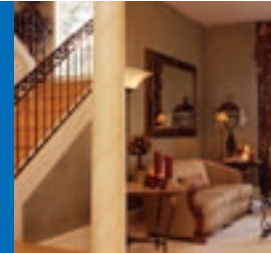

Panasonic
ideas for life

Imagine the peace

Place these Plug & Play cameras in your home, office, vacation home or almost anywhere else that you'd like to keep an eye on things, with no PC required on location!

Create a Complete Solution to Suit Your Needs

Check on your home

Check on your business

Check on your nanny

Click to Center – when you click on the image in the single camera screen it will re-center your view from that point.

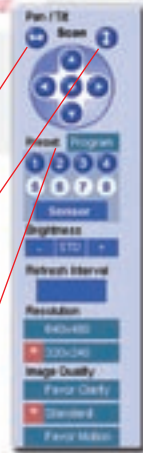

Monitoring options include:

Pan/Scan – sweep the network camera left and right.

Tilt/Scan – sweep the network camera up and down.

Pan/Tilt Controls – to move the camera up, down, left, right or to the “home” position.

Preset Positioning – lets you immediately access your 8 favorite viewing angles from the camera.

To allow easy viewing from a computer or cell phone, you can choose a personal web address, which can allow access to the password protected web page built into each camera.

And the cameras connect directly to your router, so you don't even need a computer on location.

Check on your home – See what's going on at home during the day.

Watch your vacation home – Sit back, relax and watch the sunset. The camera can even email you a picture when someone comes in!*

Check on your store – Watch store traffic to see what's selling and to find the best place for displays, and use the recording software to complete your solution.

Keep an eye on your nanny – From the office you can check in from time to time.

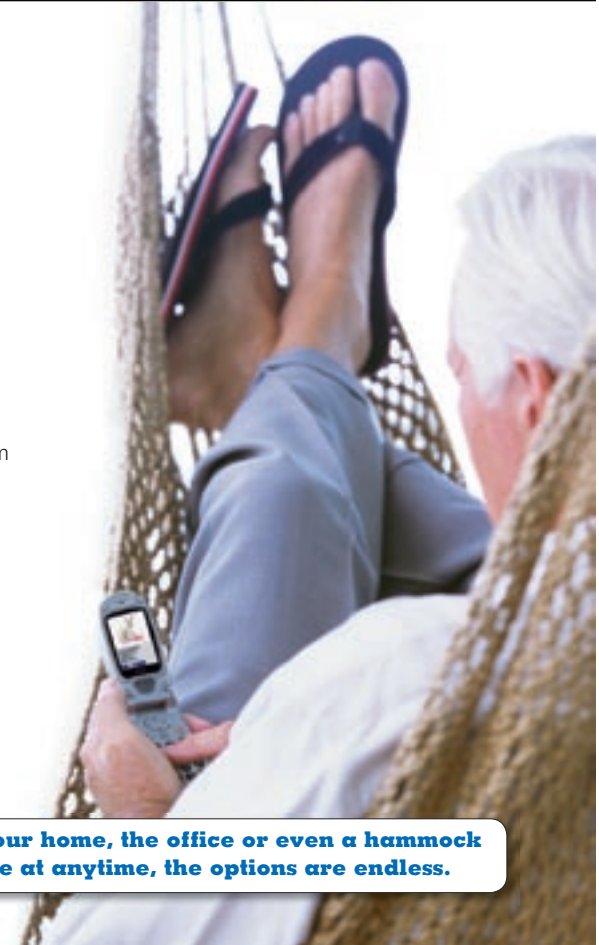

802.11g Wireless: (BL-C30A only) With the option, cameras can be moved to different rooms to get the most out of your investment

Privacy Mode: Need a little privacy? Just push the Privacy button on the front of the camera to block guest access.

Human Detection Sensor: The built-in sensor can detect the presence of people and large animals, which can trigger the camera to record images or send an e-mail of the captured image(s) to your computer or cell phone*

And the best part is this can all be done from your home, the office or even a hammock on the beach! View from just about anywhere at anytime, the options are endless.

* Connecting the camera to the Internet requires Internet access and may require that you obtain additional hardware such as a cable or DSL modem, or a hub or router with a 10/100Base-T Ethernet connection. The camera will not be accessible from across the Internet unless the Internet connection is active. We cannot guarantee that your Internet connection will always be available. The frame rate of the motion image may be dependent upon the uplink speed of the Internet connection and other factors. Viewing may involve some time delay. Recommended minimum 100kbps upstream bandwidth for camera. View through Internet Explorer 6.0 or later. Compatible cell phones and PDAs must be able to display JPEG images and HTML or XHTML Web pages. Additional fee-based cellular services may be required.
